

# Create a New Project

You have successfully created a new project: **DDEV Website**. It may take a moment to appear in the sidebar.

## Create from:

Existing Project  CMS Template

## Select your CMS:

Choose the CMS that will be used for the new project:

  Drupal 7  Drupal 8

  WordPress

  TYPO3

## Name your project:

The name of your project will be used to create the development domains on your local machine. A good example might be `your-website`.

userenteredtext

## This will create:

<http://userenteredtext.ddev.local>  
<https://userenteredtext.ddev.local>

## Select the path to your project's installation directory:

 `~/Documents/Sites/`

Create Project

Projects 

Filter by Name

 **Jed Darrohn Blog**  
Running

 **DDEV Website**  
Web Service Starting

 **That One Project**  
Stopped

 Settings

# Jed Darrohn Blog

● Running

 Stop Container

 Open phpmyadmin

 Restart Container

 Open MailHog

 Browse Local Files

 **Remove Project**

## MySQL Credentials

Name	db
Host	db
Username	db
Password	db
Port	3306
